SUMMARY

Power Platform & RPA professional with 3+ years of experience designing enterprise workflow automation solutions, building low-code applications, and delivering business intelligence systems. Reduced manual processing time by 40%+ through Power Apps, Power Automate, and Python-based automation. Experienced in Dataverse integration, multi-stage approval routing, AI-assisted monitoring, and stakeholder-driven process optimization across cross-functional teams.

EDUCATION

The University of Texas at Dallas, Dallas, TX Aug 2024 – May 2026

M.S. in Computer Science, Data Science Specialization

University of Mumbai, Mumbai, India Feb 2020 – May 2024

B.E in Information Technology

TECHNICAL SKILLS

- RPA & Automation:** Microsoft Power Automate, Power Apps, Workflow Orchestration, Business Process Automation, Low-Code Development, Robotic Process Automation
- Business Intelligence:** Power BI, Dataverse, Data Visualization, Operational Reporting, AI-Assisted Monitoring, KPI Dashboards
- Programming & Databases:** Python, SQL, JavaScript, PHP, MySQL, MongoDB
- Web & Application Development:** React.js, Flask, Microservices, CI/CD Pipelines
- Cloud & DevOps:** AWS (EC2, S3, SageMaker), Azure (AZ-900), Git, GitHub, REST APIs, Postman, Kubernetes

EXPERIENCE

Smart Data Solutions, Plano, TX Apr 2026 - Present

Business Automation Intern

- Spearheaded **5+ enterprise Power Platform** automation solutions eliminating **300+ hours/month** of repetitive manual processing; streamlined Power Apps and Power Automate pipelines that reduced average approval cycle time by **35%** through multi-stage routing, conditional logic, and real-time notifications.
- Integrated **Dataverse** with cloud repositories to manage relational data structures across **1,000+ vendor records**, implementing rule-based validation logic and error-handling mechanisms that reduced data integrity issues by **25%** and cut audit preparation time by **40%** across procurement operations.
- Developed AI-assisted client monitoring workflows aggregating merger, acquisition, and leadership events across **50+ enterprise accounts**; deployed **Power BI** dashboards surfacing vendor lifecycle KPIs and improving executive decision-making visibility across **3 departments**.

Erik Jonsson School of Engineering and Computer Science, Richardson, TX Oct 2024 – Mar 2026

Software Developer

- Delivered **React.js/Tailwind** web applications with RESTful API integration and ETL pipelines processing **10,000+ records** with regression-based forecasting at 85% accuracy, reducing frontend bounce rates by **30%** across **5,000+ monthly sessions** and cutting event overbooking losses by **20%**.
- Launched an **NLP-based AI chatbot** into internal infrastructure resolving **500+ monthly Tier-1** IT support requests and reducing ticket overhead by **45%** through intelligent FAQ mapping; configured **Power BI** dashboards enabling data-driven resource allocation across **4 administrative departments**.
- Overhauled relational database performance through advanced **SQL** joins, query restructuring, and strategic indexing on frequently accessed tables, reducing API response latency by **40%** and ensuring seamless real-time data rendering across front-end dashboards.

Agnel Robotics, Mumbai, India Sept 2021 – May 2024

Software Developer

- Architected edge-to-cloud telemetry frameworks for real-time sensor data streaming and implemented **Python-based** intelligent diagnostic tools, reducing system downtime by **25%** and accelerating fault detection response time by **35%** across distributed robotic environments.
- Constructed PyTorch/YOLO perception pipelines with custom data augmentation and labeling strategies, achieving **+30% mAP improvement** through anchor box tuning and confidence thresholding while reducing false positive detections by **15%**.
- Accelerated real-time model inference through quantization and pruning techniques, achieving **sub-30ms latency** for autonomous navigation decision-making across high-frequency live video streams in production robotic deployments.

PROJECTS

Product Feedback & Idea Hub | *Power Apps, Power Automate, Dataverse* Apr 2026 – May 2026

- Developed a centralized feedback management application using **Power Apps** and **Power Automate**, streamlining end-to-end idea submission across 3 teams and reducing submission-to-decision cycle time by **50%**.
- Designed conditional multi-stage approval workflows with scheduled email notifications, eliminating 100% of manual follow-ups and increasing stakeholder visibility into active feedback pipelines.

Client Intelligence Monitoring System | *Power Automate, Power BI, Python* Apr 2026 – May 2026

- Built automated monitoring workflows aggregating corporate event data (M&A activity, leadership transitions, ownership changes) for **50+ enterprise clients**, enabling real-time executive alerts.
- Integrated interactive Power BI reporting metrics allowing leadership teams to map client event timelines visually, reducing manual research time by **60% per account review cycle**.

Vendor Assessment & Documentation Workflow | *Power Automate, SharePoint, Power BI* Apr 2026 – May 2026

- Standardized and audited vendor lifecycle documentation (MSAs, BRDs, invoices, compliance certs) across **200+ vendor records**, implementing enforced expiration alerts with **30/60/90-day thresholds**.
- Improved end-to-end procurement visibility through architecture-driven document repositories and workflow-driven records management, reducing compliance gaps identified in **audits by 40%**.
